Ever Cat Fuels Celebrates Grand Opening, September 28, 2009

Today Ever Cat Fuels celebrates the Grand Opening of its state-of-the-art, commercial biodiesel production facility in the rural community of Isanti, MN. The new facility features a revolutionary new production technology known as the patent pending "Mcgyan[®] process". The Mcgyan[®] process uses a simple, fixed bed continuous reactor to quickly and economically catalyze the production of biodiesel fuel from a variety of low cost feedstock materials, including inedible plant waste oils.

The Mcgyan[®] process has undergone a full research and development cycle over the past three years, including small-scale production on a lab-scale model plant and long-term endurance testing. The Mcgyan[®] process has also undergone over one year of pilot scale production testing. The commercial scale Isanti production facility employs a total of 20 people and has a nameplate capacity of three million gallons per year.

Chief Science Officer, Dr. Clayton McNeff explains, "The Mcgyan[®] process uses no water, no chemicals, produces no waste products and the conversion takes just seconds in two reactors that are only 6 feet tall by 6 inches in diameter. The two reactors continuously catalyze more than a trillion-trillion reactions per second. The process is modular and can be scaled from the farm scale to the refinery scale. We believe this is a major step towards energy independence in the United States. The use of low cost waste oils vastly improves the economics of biodiesel production and makes good use of these low value commodities."

The discovery of the Mcgyan[®] process began at Augsburg College a little over 3 years ago when Professor Arlin Gyberg and then student Brian Krohn contacted Dr. Clayton McNeff and Dr. Ben Yan at sister company, SarTec Corporation. This eventually led to the discovery of the Mcgyan[®] process at SarTec labs (Anoka, MN)*. The process was then scaled from the lab to a pilot plant capable of producing 50,000 gallons per year and today to commercial scale of three million gallons per year. In the next 3 years, Ever Cat Fuels has plans to further expand to 33 million gallons a year.

Today's grand opening ceremony is being hosted by Don Shelby. Dignitaries expected to attend the event include United States Senator Amy Klobuchar, State Senator Rick Olseen, State Senator Mike Jungbauer, and Isanti Mayor George Wimmer.

** Licenses for the patented pending Mcgyan[®] process are available through the exclusive licensing company, McNeff Research Consultants. Contact Dave Wendorf, Director of Marketing, at 763-432-2743 or davewendorf@mcneffresearchconsultants.com for more information.*
